US Citizen @ NYC

EDUCATION

B.S. Computer Science · LSU New Orleans · GPA: 3.9, Magna Cum Laude

SKILLS

TypeScript, JavaScript, React, Python, FastAPI, Java, Spring Boot, Go, SQL, Postgres, HTML, CSS, Docker, Kubernetes, Terraform, Pulumi, AWS, Azure

WORK HISTORY

Software Engineer II at Microsoft Azure, New York City, NY 12/2021 – 09/2026

- Developed a customer-facing Copilot chatbot in Azure that helped new users quickly setup Azure resources.
- Fully owned and designed a **Python/FastAPI** service that would safely execute infrastructure code generated by Copilot in Azure. Implementation required rigorous design around sandboxing, performance, and observability. Used **Kafka, RabbitMQ, Cosmos DB, Kubernetes, Terraform, FluxCD, Grafana, and Helm** to manage infrastructure and achieve the performance, security, and observability requirements of the full system.
- Contributed to the LLM code generation pipeline using CI evaluation suites, tool definition design, structured outputs, and evaluations to validate generated code worked as expected and catch regressions.
- Co-designed and built an interactive tutorial experience using **Go-Lang/BubbleTea** that converted public Microsoft Docs/Tutorials into sandboxed command sequences with output validation and progress tracking; users who completed the experience were **~20% more likely** to retain Azure resources over a 3-month period.
- Built a custom **TypeScript/React** layout plugin to visualize deeply nested Azure network topologies using custom recursive coordinate calculations; another Azure team reused the algorithm for an SAP visualization.

Software Engineer at Cirrus Logic, Austin, TX 01/2020 - 12/2021

- Developed **Java** applications used by hardware engineers to debug complex chip designs. These chips were sold to Apple and used in iPhone speakers and Air pods.

Software Engineer at American Express, Phoenix, AZ 07/2018 - 12/2019

- Co-developed credit card processing pipeline with **Java/Spring** and **PostgreSQL**. Replace a legacy application that required human operators; the new system was fully automated end-to-end.
- Advocated and successfully convinced leadership to introduce CI/CD pipelines for code quality and automated deployments to improve developer experience and speed up development cycles.

PROJECTS

[imdbgraph.org](#): Built and ran IMDb Graph since 2018, a production app serving **~2K unique visits/month**.
