

Aria Amini – Software Engineer

aamini1024@gmail.com | New York City, New York | [LinkedIn](#)

WORK HISTORY

Software Engineer II 01/2022 - Present
Microsoft

- Designed and implemented the backend service used to power a new agentic chatbot to assist Azure users in generating and deploying Terraform templates for their app ideas. Written in Python/FastAPI.
- Built an interactive tutorial experience to help new potential customers learn about Azure and deploy production-ready infrastructure. Increased long-term customer retention by **~30%** when compared to control users who didn't use our entry point.
- Collaborated with stakeholders to design and implement new features to make operating a Kubernetes cluster in Azure as seamless as possible. Influenced the direction of features by being vocal about what features I thought Developers and DevOps engineers would find useful.
- Designed and implemented a new UI for customers to visualize their Azure resources as dynamically generated graphs. These graphs made visualizing complex project setups much easier for customers.
- Made accessibility a priority for our team. Gave talks about ways we could improve the accessibility of our pages with tips for writing accessible UI using semantically correct HTML and following WAI specs.

Software Engineer 01/2020 - 01/2022
Cirrus Logic

- Developed internal Java applications for hardware engineers to prototype new designs. Leveraged knowledge of low-level concepts such as bit manipulation, interrupt systems, and CPU execution pipelines.

Software Engineer 07/2018 - 12/2019
American Express

- Developed Spring/Java backend systems for processing credit card and customer data in a performant/secure manner while following strict SLA deadlines.
- Optimized a credit-card transaction processing pipeline from **~1 hour to ~5 minutes** - which saved significant computing resources and made iterating/testing the service much faster for our dev team.

EDUCATION

University of New Orleans
B.S. Computer Science, GPA: 3.9

SKILLS

-
- **Languages:** Typescript, JavaScript, Java, Python
 - **Frameworks:** React, Svelte, Node.js, Next.js, FastAPI, Spring
 - **Databases:** Postgres, Cosmos DB, SQLite
 - **DevOps/Cloud:** Azure, Docker, Kubernetes, Terraform, Pulumi

PROJECTS

-
- **IMDb Graph:** Website to help visualize IMDb ratings data for shows. Gets **~5000** unique monthly visitors.
 - **pdf-converter:** Wrote a simple python script to help artist friends automatically bulk convert PDFs into different paper sizes (A1, A2, etc.). The only alternatives at the time were paid for online services.
 - **Ducky-mot:** Developed a free landing page for my friend's live event scheduling business.
